Agent Guide

This guide is for **Agents**: travel agents who book flights for an organization's trips. A System Admin or Org Admin gives you the Agent role in an organization.

What you can do

- See the organization's trips on Home.
- Open a trip's **Flights** page and, for every participant:
  - see who books their flight and what they requested;
  - enter their arrival and return flight segments and confirmation number;
  - record the flight's cost and comments.
- Download the **Flights PDF**, and send each participant their itinerary with **Email flight itinerary**.

You can't see participants' profiles, applications, or other trip pages.

The menu bar

You see **Dashboard**, the **Organization** selector (if you book for more than one organization), and the user menu. Every other page sends you back to Home.

Entering flights

1. On Home, choose **Flights** (the airplane icon) on the trip's row.
2. On the participant's row, choose **Flight segments**.
3. Check their planned arrival and departure dates and, when the organization books, their requested flight details.
4. Under **Arrival Flight**, choose **Add Segment** for each leg to the trip. Under **Return Flight**, do the same for each leg home.
5. Fill in the **Confirmation number**.
6. Choose **Save**.
7. Back on the row, enter **Cost** and **Comments** and choose the row's **Save** icon.

Warnings show when the flights don't match the planned dates or the requested airports.

Airports and airlines come from shared lists kept by the System Admin. If one is missing, ask them to add it.

Screen reference

Home

Your organization's name, then **Organization Trips**. **Show all trips** — unticked shows only active trips that haven't ended; tick it to see every trip.

Column	Shows
Name	The trip.
Location	Where it goes.
Start, **End**	The trip dates.
Status	`active`, `completed`, or `inactive`.

Actions	**Flights** opens the trip's Flights page.

Flights page

Titled "*Trip* — Flights". At the top: **Back to home**, **Flights PDF** (every participant's itinerary), and **Email flight itinerary**.

The table lists everyone who is Incomplete, Pre-Approved, or Approved.

Column	Shows / enter
First name, **Last name**	The person.
Booked by	Who buys the flight: the organization's name, "Participant" (they book their own), or "Not chosen". The info icon shows **Requested flight info**: Preferred departure airport, Preferred return airport, Class of travel, Preferred airline, Refundable ticket, and Flight notes.
Arrives	Planned arrival date: the trip start, moved by their trip options. A warning icon means the arrival flight lands on a different day.
Departs	Planned departure date, with the same warning for the return flight.
Cost	The flight's cost. Disabled when the participant books their own flight. It's added to the participant's trip cost when the organization books.
Comments	Notes about the booking.
Initial departure	Date, time, and city of the first arrival leg. A warning shows when it leaves from a different airport than requested.
Final arrival	Date, time, and city of the last return leg, with the same warning.
Actions	**Save** (saves Cost and Comments), **Flight segments**.

Flight segments

Titled "Flight segments — *name*", with **Booked by**, **Planned arrival**, **Planned departure**, **Requested** (airports, class, airline, refundable), and **Flight notes**.

- **Confirmation number** — the booking reference, up to 50 characters.
- **Load from text** — opens **Load itinerary from text**. Paste the airline's itinerary email into **Itinerary text**. **Parsed itinerary** lists each flight it could read, using the full airline list and the full airport list. A date on its own line applies to the flights below it. The airport and time may be listed before the flight number. When the arrival time is earlier than the departure time, the arrival date is the next day. **Seat:** in the email is copied to **Seat #**. **Confirmation code:** or **Confirmation number:** in the email is copied to **Confirmation number**. The earlier dates are arrival flights. The later dates are return flights. **Load** fills the segments and closes the text dialog. It does not save. **Cancel** closes it and leaves the segments as they were.
- **Arrival Flight** / **Return Flight** — each with **Add Segment**.

Each segment has:

Field	Choices / notes
Segment #	The leg's order, starting at 1. Can't repeat within Arrival or Return.

Departure airport	Every airport ("CODE — City"); type a code, city, name, or country. A new first arrival leg starts with the requested departure airport; later legs start with the previous leg's arrival airport.
Arrival airport	Same list.
Airline	Every airline ("CODE — Name").
Flight #	The flight number.
Class of travel	Basic Economy, Economy, Premium Economy, Business, First
Seat #	Optional.
Departure date, **Departure time**	When the leg leaves. The first arrival leg starts on the planned arrival date; the first return leg on the planned departure date.
Arrival date, **Arrival time**	When it lands. Can't be before the departure.

Airports, airline, flight number, and both dates and times are required. **Delete** removes a leg.

Email flight itinerary

Field	Notes
Email template	The organization's Flight itinerary templates.
Subject, **Email body**	Filled in from the template; edit for this send only.
Send to	**All potential participants**, **All accepted participants** (Approved only), or **Selected participants** (pick them in **Participants**).

Preview shows one person's email. **Send** asks for confirmation, then shows **Attempted**, **Sent**, **Skipped**, and **Failed**. People with no flight segments are skipped ("No flight segments.").
